

Flanged Dual-Port Valve Component

This machinery component features a flanged connection and dual ports. The construction is suited for fluid or gas handling applications, potentially involving corrosive or high-purity substances.

Product Overview

High-Performance Dual-Port Valve Component

This flanged dual-port valve component is engineered for demanding industrial fluid and gas handling applications. Its robust construction and specialized white finish are designed to withstand challenging environments, potentially including high-purity or corrosive media. The unit features a standard flanged connection, ensuring secure and reliable integration into existing piping systems.

Design & Construction

Finish

Specialized White Coating

Connection Type

Flanged

Port Configuration

Dual-Port

Application Suitability

Suitable Media

Fluid, Gas, High-Purity, Corrosive
