

Flaring Cup Grinding Wheel

Flaring cup wheels are designed for grinding and shaping applications. The flared cup shape allows for efficient material removal and precise control during use on metal, stone, and concrete.

Product Overview

Professional Flaring Cup Grinding Wheels

These flaring cup grinding wheels are engineered for high-performance grinding and shaping applications across various industrial materials. The distinct flared cup geometry provides superior control and efficient material removal, making them an essential tool for surface finishing and weld preparation. Designed for versatility, they are compatible with a wide range of abrasive types and grit sizes to suit specific project requirements in tool and die making.

Technical Specifications

Design & Construction

- Flared cup geometry for precise material removal
- High-durability abrasive bond construction
- Optimized for surface finishing and shaping

Primary Applications

Metalworking, Stone Grinding, Concrete Finishing, Weld Preparation, Tool and Die Making
