

Flatbed Embroidery Machine

This flatbed embroidery machine is designed for high-precision embroidery and textile manufacturing. It features multiple embroidery heads and a robust flatbed design to accommodate various fabric types, incorporating computerized control systems for pattern design and execution.

Overview

Industrial Flatbed Embroidery Series

The ZJ700-FB Flatbed Series is a high-precision embroidery system engineered for large-scale textile production and custom apparel decoration. Featuring a robust flatbed design, the machine accommodates diverse fabric types while maintaining consistent accuracy through an advanced computerized control interface. High-speed servo motors and automated tension systems ensure reliable, repeatable performance for demanding industrial environments.

Technical Features

Construction Details

- Robust flatbed construction
- Advanced needle and thread management
- High-speed servo motor drive
- Digital pattern execution system

Core Capabilities

High-Speed Embroidery, Multi-Head Operation, Computerized Control, Automated Tension

Applications

Industry Applications

- Industrial-scale embroidery
- Custom apparel production
- Textile decoration projects
