

Flexible Component for Garment/Shoe Machinery

Component designed for use in garment, shoe, and accessory manufacturing machinery. These flexible parts are typically made of plastic or rubber and assist in guiding and shaping materials during production processes.

Product Overview

Precision Component for Manufacturing

This flexible component is engineered specifically for use in garment, shoe, and accessory manufacturing machinery. Designed for durability and adaptability, it serves as a critical part for guiding, pressing, or shaping materials during the production process. Its flexible material composition ensures consistent performance and reliability in demanding industrial environments.

Technical Details

Primary Function

- Material Guiding
- Pressing
- Shaping

Material Type

Flexible Polymer/Rubber

Application Areas

Garment Manufacturing, Shoe Production, Accessory Fabrication
