

Flexible Pipe Coupling with Stainless Steel Sleeve

This flexible coupling is designed for joining pipes or tubes. It features a corrugated stainless steel sleeve secured by stainless steel bands, providing a secure and adaptable connection.

Product Overview

Flexible Pipe Coupling Solution

This flexible pipe coupling is engineered for reliable joining of pipes and tubes in demanding environments. Featuring a durable corrugated stainless steel sleeve, it provides excellent resistance to corrosion while accommodating slight misalignments and vibrations. The integrated internal sealing material ensures a robust, watertight connection, making it an ideal choice for automotive, plumbing, and various industrial piping systems.

Technical Specifications

Key Features

- Corrugated sleeve design
- Vibration dampening
- Misalignment compensation
- Watertight sealing

Material Composition

Stainless Steel, Rubber Seal

Connection Mechanism

Dual stainless steel band tightening system

Applications

Recommended Industries

Automotive • Plumbing • Industrial Piping
