

Float Switch for Pump Systems

This float switch is designed to be used as a pump accessory. It detects liquid levels and automatically controls the pump accordingly.

Product Overview

Professional Pump Control

This float switch serves as a critical accessory for automated pump systems, providing reliable liquid level detection. Designed for integration with pump control systems, it ensures efficient and hands-free operation by monitoring fluid levels. The durable construction is optimized for demanding environments, making it an essential component for effective liquid management.

Technical Details

Primary Function	Liquid level detection and pump automation
Float Design	Rectangular enclosure with integrated cable
Compatibility	Pump Systems, Control Panels, Automated Liquid Level Monitoring
