

Flooded Type Water/Ground Source Heat Pump

This industrial water-cooled chiller is engineered for efficient cooling in commercial and industrial settings. It utilizes a flooded-type evaporator to enhance heat transfer and energy efficiency, making it suitable for water or ground source heat pump systems.

Product Overview

High-Efficiency Flooded Cooling Solution

This industrial water-cooled chiller is engineered for high-performance cooling in demanding commercial and industrial environments. By utilizing a specialized flooded-type evaporator, the system achieves superior heat transfer rates and exceptional energy efficiency. It is designed to function seamlessly in both water and ground source heat pump configurations, ensuring reliable, consistent performance for large-scale operations.

Technical Features

Key Advantages

- Enhanced heat transfer efficiency
- Optimized refrigerant cycle
- Robust industrial construction
- Advanced control system

Evaporator Design	Flooded-type
Application Suitability	Commercial, Industrial, Large-scale Cooling, Water Source Heat Pump, Ground Source Heat Pump
