

Fluid Check Valve

This check valve allows flow in a single direction. It prevents backflow in fluid systems to maintain pressure and prevent contamination.

Product Overview

High-Intensity Discharge Xenon Technology

This high-intensity discharge (HID) Xenon bulb is engineered for superior automotive lighting performance. Utilizing a quartz glass capsule filled with Xenon gas and metal halide salts, it delivers a bright, white light output essential for clear visibility. Designed for reliability and precise light distribution, it features an integrated metallic shield to minimize glare while maintaining optimal beam patterns.

Technical Specifications

Operational Requirements

- High voltage operation
- External ballast required for current regulation

Key Features

Glare Control Shield • High-Intensity Output • Precision Electrodes

Bulb Type	HID Xenon
Construction Materials	Quartz Glass, Ceramic Base, Metal Halide
