

Fluid Control Ball Valve

This ball valve is designed for controlling the flow of fluids. It features a threaded connection on one end and a compression fitting on the other, operated by a square handle for easy on/off control.

Product Overview

Reliable Fluid Flow Control

The Fluid Control Ball Valve is a robust solution designed for precise flow regulation in plumbing and industrial environments. Featuring a versatile combination of threaded and compression connections, it ensures a secure, leak-resistant installation. The intuitive square handle design allows for quick and easy on/off operation, making it an essential component for systems requiring dependable shutoff capabilities.

Technical Specifications

Common Applications

- Plumbing systems
- Industrial fluid control
- Flow shutoff applications

Material	Brass
Connection Types	Threaded, Compression
Operation	Square Handle
