

Fluid Control Ball Valve

This ball valve is designed to control fluid flow in industrial applications. It features a stainless steel construction with a handle, stem, body, and fittings.

Product Overview

Industrial Fluid Control

This high-performance stainless steel ball valve is engineered for precise fluid flow regulation and reliable shut-off in demanding industrial environments. Featuring a robust construction, it includes a durable handle, stem, body, and precision fittings to ensure system integrity. Its design is optimized for versatility, making it a dependable choice for various liquid and gas control applications.

Technical Specifications

Components

- Handle
- Stem
- Body
- Fittings

Material	Stainless Steel
Handle Color	Blue
Key Features	Robust Construction, Reliable Shut-off, Flow Regulation
