

Fluid Transfer Centrifugal Pump

This centrifugal pump is designed for fluid transfer applications. It features a volute casing, impeller, and a shaft connected to the motor via a coupling, all mounted on a sturdy baseplate.

Overview

Industrial Fluid Transfer Solution

This horizontally mounted centrifugal pump is engineered for efficient and reliable fluid transfer across a wide range of industrial and commercial applications. Featuring a robust volute casing and precision-engineered impeller, the unit ensures consistent flow rates and operational stability. The entire assembly is mounted on a heavy-duty baseplate, specifically designed to minimize vibration and facilitate seamless integration into existing processing systems.

Technical Specifications

Core Components

- Electric Motor
- Volute Casing
- Impeller
- Drive Coupling
- Baseplate

Mounting Configuration	Horizontal
Application Areas	Industrial Fluid Handling, Commercial Liquid Transfer, General Pumping Systems
