

Fly Ash Silo System with Integrated Material Handling

This fly ash silo system integrates feeding, conveying, dedusting, classification, and discharging components. The silos are constructed from durable materials and equipped with advanced dust collection technology.

Product Overview

Industrial Fly Ash Storage & Handling

This comprehensive silo system is engineered for the efficient storage and handling of industrial materials including cement, fly ash, coal ash, and lime. It integrates essential material handling processes such as feeding, conveying, dust collection, homogenization, and controlled discharging. Designed for durability and environmental compliance, the system ensures seamless material flow and optimized processing for various industrial applications.

Technical Specifications

Core Components

- Motor
- Pressure vessel
- Pump

Operating Voltage	220V, 380V
Galvanization Coating	275-600g/m2

System Integration

Integrated Auxiliary Systems

- Bucket Elevator or Pneumatic Feed
- Effective Dust Collector System
- Homogenization System
- Materials Discharging System
- Materials Truck Loading System

Commercial & Support

Warranty

1 Year

Core Components Warranty

1 Year

System Warranty

After-Sales Support

Video Technical Support • Online Support • Spare Parts • Field Maintenance • Field Installation • Commissioning & Training

Certifications
