

Food and Beverage High-Pressure Cleaning Machine

This robust machine is designed for food and beverage applications. It features a high-pressure hose and lance attachment for effective cleaning and includes side ventilation for optimal thermal management during operation.

Overview

High-Performance Cleaning Solution

The YLQ17S Series high-pressure cleaning machine is engineered specifically for demanding food and beverage industrial environments. It features a robust yellow housing designed for durability, integrated with a handle to ensure high portability across processing facilities. Advanced thermal management via side ventilation maintains operational efficiency, while included professional-grade hose and lance attachments provide reliable cleaning performance.

Design & Construction

Housing Type	Robust protective casing
Color	Yellow
Portability	Integrated handle, Portable unit

Operational Features

Controls

- Power switch
- High-pressure lance connection
- Hose attachment interface

Thermal Control	Integrated side ventilation system
