

Food and Beverage Processing Machinery

Machinery designed for food and beverage processing applications. It incorporates a sensor for locating edges of wood and metal studs, a clear display, and a comfortable grip.

Product Overview

Precision Detection Technology

This precision instrument is engineered for accurate detection in construction and renovation environments. It features an advanced sensor capable of locating the edges of both wood and metal studs with high reliability. Designed with user comfort in mind, the device includes an ergonomic grip for extended use and a clear, easy-to-read display for efficient operation.

Technical Features

Detection Capabilities

- Wood stud detection
- Metal stud detection
- Edge location tracking

Usability Features

Ergonomic Grip, Clear Display, Extended Use Ready

Applications

Suitable Applications

Construction • Renovation • Professional Installation
