

# Food and Beverage Processing Vessel

This stainless steel processing vessel is designed for food and beverage applications. The industrial machinery features a cylindrical tank with a domed top, equipped with ports, valves, gauges, a pump unit, and an adjustable frame.

## Overview

### Industrial Processing Solution

This stainless steel processing vessel is engineered specifically for the food, beverage, and cereal industries. Designed for versatility, it supports essential operations including mixing, heating, cooling, and general processing of various liquid and semi-liquid food products. The system is built for reliability, featuring a robust cylindrical tank with a domed top and integrated controls for precise monitoring.

## Technical Specifications

Construction Material	Stainless Steel
Tank Configuration	Cylindrical with domed top
Mounting Type	Sturdy frame with adjustable feet

## Components

### Integrated Components

- Fluid transfer pump unit
- Monitoring gauges
- Control valves
- Multiple input/output ports

## Applications

### Core Capabilities

Mixing • Heating • Cooling • Liquid Transfer

Industry Applications	Food Processing, Beverage Production, Cereal Processing
