

Food Traceability and Management Software

This software is designed for the traceability and management of food. It uses electronic tags and mobile enforcement platforms to enable secure tracking and real-time monitoring throughout the food supply chain.

Overview

Olympic-Grade Food Safety & Traceability

This advanced software solution provides end-to-end traceability and management for sensitive food supply chains. By utilizing electronic RFID tagging and integrated mobile enforcement platforms, the system ensures secure monitoring from transport to consumption. It delivers real-time visibility into environmental conditions and logistics, facilitating precise safety oversight for high-demand operations.

Technical Features

Monitoring Functions

- Automatic food information collection
- Real-time vehicle route tracking
- Cargo door status monitoring
- In-cabin environmental analysis
- Automated early warning system

Core Technologies

RFID, GIS, GPS, Internet Connectivity, Humidity Sensing, Mobile Enforcement Integration

Management & Compliance

Regulatory Standards

Traceable System • Safety Compliance • Dynamic Supervision

Consumption Management

Yes
