

Forged Steel Ball Eye Fitting for Insulators

Forged steel ball eye fitting used in electrical transmission and distribution systems. It connects insulators to other hardware components and features a corrosion-resistant finish for durability in outdoor environments.

Product Overview

Forged Steel Ball Eye Fitting

This forged steel ball eye fitting is designed for use in electrical transmission and distribution systems. It provides a robust connection point for insulators to other hardware components. Constructed from high-strength steel, it is engineered for exceptional mechanical strength and long-term durability in demanding outdoor environments.

Technical Specifications

Material and Finish	Hot-dip galvanized steel
Corrosion Resistance	Yes
Primary Application	Electrical Transmission, Distribution Systems, Insulator Hardware
