

Four-Cylinder Diesel Engine for Industrial Applications

This four-cylinder diesel engine is designed for a range of industrial applications. It features a high-pressure fuel injection system, durable cast iron block, and efficient cooling system for reliable power.

Product Overview

Robust Industrial Power Solution

The R4105T series engine is a robust and reliable four-cylinder power solution designed specifically for demanding industrial environments. Engineered for durability, it features a heavy-duty cast iron block and a high-pressure fuel injection system that ensures optimized combustion and efficient operation. This versatile engine is ideally suited for deployment in generators, construction equipment, and agricultural machinery.

Technical Specifications

Cylinder Configuration	4
Engine Type	Diesel
Core Features	Four-Cylinder, High-Pressure Fuel Injection, Cast Iron Block, Efficient Cooling System

Applications

Suitable Applications

- Power Generators
- Construction Machinery
- Agricultural Equipment
- Heavy-Duty Industrial Drives
