

Four-Cylinder Diesel Engine

This robust diesel engine is designed for power generation and industrial machinery applications. Its four-cylinder configuration ensures smooth and efficient operation.

Overview

Robust Power Solution

The Y485G is a high-performance four-cylinder diesel engine engineered for versatility in power generation and industrial applications. It features a mechanical fuel injection system designed to provide consistent reliability in demanding work environments. Its compact, durable build ensures longevity while simplifying routine maintenance for professional operators.

Technical Specifications

Key Integrated Components

- Fuel filters
- Alternator
- Cooling fan

Cylinder Configuration	4
Fuel Injection Type	Mechanical
Suitable Applications	Power Generation, Industrial Machinery
