

Four-Wheel Drive Wheel Loader

This wheel loader is designed for material handling tasks with its four-wheel drive and robust construction. Its large-capacity bucket allows for efficient loading and unloading of materials like soil, gravel, and sand.

Overview

Versatile Material Handling

The SL20W is a high-performance four-wheel drive wheel loader engineered for diverse material handling tasks across construction and agricultural sectors. Featuring a robust chassis and a high-capacity bucket, it excels in moving soil, gravel, sand, and heavy aggregates with precision. Its advanced hydraulic system provides smooth control, while the operator-focused cabin maximizes visibility and safety during demanding operations.

Performance Metrics

Drivetrain	Four-Wheel Drive
Primary Applications	Construction, Agriculture, Material Handling, Industrial

Operator Features

Cabin Features

- Ergonomic controls
- High-visibility design
- Enhanced safety features

Operational Details

Material Handling

- Soil
- Gravel
- Sand
- Aggregates
