

Full Suspension Mountain Bike for Downhill and Freeride

This full-suspension mountain bike is designed for tackling challenging terrain during downhill and freeride activities. Its geometry is optimized for stability and control at high speeds.

Overview

Professional Downhill Performance

This 200mm-travel full-suspension mountain bike is engineered for demanding downhill and freeride conditions. Built on a durable M4 alloy frame with advanced FSR linkage technology, it provides high-level control and stability. The setup features premium coil-sprung suspension components and powerful hydraulic disc brakes to ensure performance on technical descents.
