

# G-Clamp

This G-clamp, also known as a C-clamp, is used for holding wood or metal workpieces. It utilizes a C-shaped frame with a screw mechanism to apply pressure and secure the workpiece.

## Product Overview

### Professional Grade G-Clamp

The G-clamp, or C-clamp, is an essential tool designed for securing wood or metal workpieces during assembly. Featuring a durable C-shaped frame and a precision screw mechanism, it provides reliable pressure for a variety of demanding tasks. This versatile tool is ideal for woodworking, metalworking, and general construction applications including gluing, welding, and assembly.

## Technical Details

### Typical Tasks

- Gluing workpieces
- Holding metal during welding
- Securing components for assembly

<b>Mechanism Type</b>	Screw-driven C-frame
<b>Primary Applications</b>	Woodworking, Metalworking, Construction, Welding, Assembly
