

Galvanized Hexagonal Wire Mesh

This hexagonal wire mesh is made from low carbon steel wire, typically galvanized or plastic-coated for enhanced durability. Featuring a firm structure and flat surface, it is ideal for agricultural applications, poultry cages, garden fencing, and decorations.

Overview

Versatile Hexagonal Wire Netting

Hexagonal wire netting, commonly referred to as chicken wire or hex mesh, is a highly versatile and economical solution for various industrial and agricultural needs. Woven into a distinct hexagonal pattern, this mesh offers an ideal balance of structural strength and flexibility. Its galvanized construction ensures robust corrosion resistance, making it suitable for demanding outdoor environments and long-term applications.

Technical Specifications

Material	Galvanized steel wire
Weave Pattern	Hexagonal

Applications

Primary Applications	Poultry enclosures, Garden fencing, Stucco reinforcement, Insulation support, Erosion control
----------------------	---

Key Features

Performance Highlights

1 High

Corrosion Resistance

1 High

Flexibility
