

Galvanized Steel Roof Panel Roll Forming Machine

This machine is an efficient solution for manufacturing high-quality galvanized roof panels. Engineered for precision and durability, it ensures consistent panel formation.

Overview

Professional Roll Forming Solution

This galvanized steel roof panel roll forming machine is engineered for high-efficiency production in steel construction projects. Designed for precision and durability, it consistently shapes metal sheets into high-quality roof and wall panels. The system features advanced controls for adjusting key parameters such as panel dimensions and cutting length, making it a versatile and cost-effective solution for large-scale manufacturing facilities.

Technical Specifications

Power Rating

5.5 kW

Power Output

Voltage Requirements	380V, 3 phase
----------------------	---------------

Making Speed	10 m/min
--------------	----------

Dimensions & Build

Machine Dimensions (L*W*H)	6600 * 1400 * 1300 mm
----------------------------	-----------------------

Operational Details

Primary Use	Roof Panels, Wall Panels, Steel Construction
-------------	--

After-sales Support	Engineers available to service machinery overseas
---------------------	---

Compliance

Certifications

BV Certified

Warranty	1 Year
