Product Overview

Reliable Off-Grid Cooling Solution

This gas-powered refrigerator is engineered for environments where electricity is limited or unavailable, making it an ideal choice for off-grid cabins, RVs, and remote locations. The unit features a dual-compartment design with a dedicated top freezer and a spacious bottom refrigerator section. With intuitive manual controls, it offers dependable operation and flexible storage options to meet diverse food preservation needs.

Technical Specifications

Power Source	Gas
Configuration	Top Freezer
