

Gasoline and Diesel Engine Water Pump

This water pump is designed for water transfer applications and can be powered by either gasoline or diesel engines. It features a high-efficiency impeller and durable cast iron housing.

Overview

Versatile Water Transfer Solution

The YGP series water pump is a robust and highly efficient solution designed for diverse water transfer applications. Engineered for flexibility, it supports both gasoline and diesel engine configurations to suit various operational environments. With a durable cast iron housing and self-priming capability, this pump ensures reliable performance for irrigation, construction, and dewatering tasks.

Technical Specifications

Key Features

- Self-priming mechanism
- High-efficiency impeller
- Durable cast iron housing
- Sturdy protective frame

Engine Compatibility

Gasoline, Diesel

Applications

Suitable Applications

Irrigation • Construction • Dewatering • General Water Transfer
