

Gasoline Centrifugal Water Pump

Gasoline-powered centrifugal pump designed for water transfer applications. It features a robust engine for reliable performance and a durable pump housing for extended life.

Product Overview

High-Performance Gasoline Centrifugal Pump

This gasoline-powered centrifugal pump is designed for efficient water transfer across various industrial and agricultural applications. Built with a robust engine and durable pump housing, it ensures reliable performance for irrigation, construction dewatering, and general fluid management. The unit features a sturdy frame for enhanced portability and protection in demanding work environments.

Technical Specifications

Available Models

- GWP-20
- GWP-30

Key Features

Robust Engine • Durable Housing • Sturdy Protective Frame • High Flow Rate

Primary Applications

Irrigation, Construction, Dewatering, Water Transfer
