

Gasoline Centrifugal Water Pump

Gasoline-powered centrifugal pumps designed for water transfer applications. Their centrifugal design allows for high-volume water displacement, making them suitable for irrigation, construction, and emergency water removal.

Product Overview

Professional Gasoline Centrifugal Water Pumps

The GWP-40 and GWP-50 series are high-performance gasoline-powered centrifugal pumps engineered for demanding water transfer applications. Featuring a robust, durable frame for enhanced protection and portability, these units deliver reliable power for irrigation, construction sites, and emergency water management. Designed for ease of use and maintenance, these pumps provide an efficient solution for high-volume water displacement.

Technical Specifications

Primary Applications

- Agricultural Irrigation
- Construction Site Dewatering
- Emergency Water Removal

Pump Type	Centrifugal
Power Source	Gasoline Engine
Available Models	GWP-40, GWP-50

Design & Build

Design Features

Robust Frame • Portable Design • Easy Maintenance
