

Gasoline Engine for Power Equipment

This gasoline engine is designed for various applications. It features a robust construction and is suitable for use in generators, water pumps, and other power equipment.

Overview

High-Performance Gasoline Engine

This high-performance gasoline engine is engineered for reliable operation and long-lasting performance across various industrial and commercial applications. Featuring a robust construction, it is designed for easy installation and maintenance in diverse power equipment setups. Its compact design and efficient air filter system ensure consistent power delivery for demanding tasks.

Technical Specifications

Key Components

- Recoil starter
- Air filter system
- Carburetor
- Spark plug
- Exhaust system

Engine Type

Gasoline Engine

Applications

Suitable Applications

Generators, Water pumps, Power equipment

Design Features

Design Highlights

Compact design • Robust construction • Easy maintenance
