

Gasoline Engine for Power Generation

This gasoline engine is designed for power generation. It provides mechanical power through combustion for various applications.

Product Overview

High-Performance Power Generation Engine

This robust gasoline engine is engineered specifically for reliable power generation applications. Featuring a 212cc displacement and a 7.0HP output, it provides consistent mechanical power suitable for various portable equipment. Its OHV 4-stroke design ensures efficient operation and durability for professional use.

Performance Metrics

Maximum Output

7 HP

Max Output

Technical Specifications

Engine Type	Single Cylinder 4-stroke Forced air cooling OHV
Bore x Stroke	70x55 mm
Displacement	212 cc

Capacity & Efficiency

Fuel Tank Capacity	3.6 L
Oil Capacity	0.6 L
Fuel Consumption	d39g/kw-h
