

# Gasoline Engine Water Pump

This water pump is designed for various water transfer applications. It is powered by a gasoline engine, providing efficient and portable operation for high-volume water displacement.

## Overview

### Professional Water Transfer Solution

The BS100ZB30-5.8Q is a robust, gasoline-powered water pump designed for high-volume water displacement. Its durable protective frame ensures reliability in demanding environments such as irrigation, construction, and emergency water removal. This portable unit offers efficient operation for a variety of professional water transfer applications.

## Technical Performance

### Engine Power Rating

**5.8 HP**

Engine Output

### Model Number

BS100ZB30-5.8Q

## Design Features

### Design Highlights

Protective Roll Frame, Portable Design, Gasoline Powered, High-Volume Displacement

## Applications

### Recommended Uses

- Agricultural Irrigation
- Construction Site Dewatering
- Emergency Water Removal
