

# Gasoline Engine Water Pump

This self-priming centrifugal water pump is powered by a robust gasoline engine, making it ideal for irrigation, drainage, and general water transfer applications. Featuring a durable construction and efficient design, this pump delivers reliable performance for various agricultural and industrial needs.

## Overview

### High-Performance Gasoline Engine Water Pump

This self-priming centrifugal water pump is powered by a robust gasoline engine, engineered for reliability in demanding environments. It is perfectly suited for agricultural irrigation, site drainage, and general-purpose water transfer tasks. Housed in a durable protective frame, this unit is designed for both easy transport and long-term industrial durability.

## Technical Specifications

### Engine Power Output

**5.5 HP**

Horsepower

Model Series	STP30
Pump Mechanism	Self-priming centrifugal

## Features

### Construction

Protective Frame • Durable Construction • Portable Design

Common Applications	Irrigation, Drainage, Water Transfer
---------------------	--------------------------------------
