Product Overview

High-Performance Gasoline Water Pump

This gasoline-powered centrifugal water pump is engineered for demanding agricultural and industrial water transfer tasks. Featuring a forced air-cooling system and a reliable engine, it provides consistent high flow rates for irrigation and drainage applications. Its robust design includes a protective frame for enhanced durability and ease of transport in rugged job site conditions.

Technical Specifications

Engine Power

5.5 HP

Engine Output

3600 rpm

Engine Speed

Connection Size

50 mm

Cooling System

Forced air cooling

Usage & Applications

Primary Uses

Farmland irrigation, Fire protection, Industrial water supply, General drainage
