

Gasoline High-Pressure Water Pump

This gasoline-powered high-pressure pump is designed for efficient water transfer and irrigation. Featuring a robust engine and durable pump construction, it delivers high flow rates and pressure for demanding applications.

Overview

High-Performance Gasoline Water Pump

This gasoline-powered high-pressure water pump is engineered for reliability and high-efficiency performance in demanding environments. Featuring an advanced combustion chamber for superior fuel economy and a heavy-duty frame with anti-vibration technology, it ensures smooth operation and extended equipment longevity. Whether for agricultural irrigation, construction site water management, or municipal drainage, this unit provides the consistent power and durability professionals require.

Performance & Build

Key Operational Features

- Easy and fast starting
- Low vibration operation
- Advanced combustion chamber
- Low running temperature

Pump Body Material	Aluminum Alloy, Cast-Iron
Mechanical Sealing	High quality ceramic

Applications

Primary Applications

Agricultural Irrigation • Construction Sites • Mining Water Pumping • Municipal Drainage
