

Gasoline Welding Generator 200A

This gasoline welding generator is designed for both power generation and welding applications. It features a 1000W AC output at 220V and a welding current of 200A, accommodating electrodes with a diameter of 1-4mm.

Overview

Dual-Function Power Solution

This gasoline-powered welding generator is engineered for versatility, serving as both a reliable power source and a high-performance welding unit. It is designed for professional use, offering a robust frame for durability and portability in various working environments. With dual functionality, it provides essential AC power for tools and equipment while delivering stable current for welding tasks.

Technical Specifications

| | |
|--------------------|-----------|
| Welding Current | 200 A |
| Welding Voltage | AC 20-75V |
| Electrode Diameter | 1-4mm |

Power Output

| | |
|--------------------|------------|
| AC Output Power | 1000 W |
| AC Voltage Options | 110V, 220V |

Key Features

Control Interface

- Engine Start/Stop Switch
- AC Power Switch
- Welding Function Switch
- AC Switch Lamp
