

General-Purpose Air-Operated Double-Diaphragm (AODD) Pump

This general-purpose pump is an air-operated double-diaphragm (AODD) type, designed for fluid transfer. It features a durable construction with metallic housings and is suitable for industrial applications.

Overview

General-Purpose AODD Pump

This air-operated double-diaphragm (AODD) pump is engineered for reliable and versatile fluid transfer across diverse industrial applications. Its robust construction features metallic housings and a durable polymer central section, ensuring long-term performance even in demanding environments. Capable of handling a wide variety of fluids, including those containing solids, this pump utilizes compressed air to actuate the diaphragms for efficient and consistent pumping action.

Technical Specifications

Fluid Handling

- General fluids
- Fluids containing solids

Pump Type	Air-Operated Double-Diaphragm (AODD)
Housing Material	Metallic, Aluminum/Stainless Steel
Center Section Material	Durable Polymer
Operation Method	Compressed Air Actuation
