

Generator Carburetor

This carburetor is designed for use in generators, ensuring optimal fuel and air mixture for efficient engine performance. It features a robust construction for durability and long-lasting use.

Product Overview

Engine Performance Optimization

This high-quality carburetor is engineered specifically for generator applications, ensuring the precise air-fuel mixture required for optimal engine performance. Built with robust materials for durability, it is designed to withstand the rigorous demands of power generation. The unit features essential components including a float bowl, jets, throttle valve, and choke mechanism to ensure consistent and reliable operation across diverse conditions.

Technical Specifications

Included Components

- Float bowl
- Jets
- Throttle valve
- Choke mechanism

Compatibility

Multiple Models

Application

Generator, Engine Parts
