Product Overview

Extended Run Fuel Solution

The Generator Extended Run Fuel System allows users to connect an external fuel tank to their generator, significantly extending operation time for emergency power or extended camping. Featuring a robust quick-connect interface and high-seal thread design, this kit ensures a secure, leak-proof fuel delivery system. It is designed for convenience and durability, preventing hose distortion and simplifying the connection process for professional and recreational users.

System Components

Included Components

- 1x Long fuel pipe with automatic lock
- 2x Short fuel pipes
- 2x Fuel tank caps

Key Features

Quick-Connect Interface, Leak-Proof Seal, Automatic Locking Mechanism, Dual Generator Support

Technical Specifications & Compatibility

Connector Components

Component	Function/Detail
Locking Spring	Secures the quick-connect mechanism
O-Rings	Internal and external seals for leak prevention
Spacer Ring	Structural component for connector housing
Securing Ring	Ensures proper hose attachment

Operational Guidelines

Usage Precautions

- Requires external tank with thread outlet (e.g., EPA certified portable tank)
- Fuel cap model must match generator model
- Non-Honda generators require gravity-fed positioning (tank higher than generator)
- Rotate fuel cap carefully to prevent plastic thread damage
