

Generator Set Controller

This advanced generator controller is designed for comprehensive monitoring and control of generator sets. It provides precise voltage readings for each phase, ensuring optimal performance and protection.

Overview

Advanced Generator Control Module

This generator set controller is designed for reliable monitoring and management of single generator sets. It supports both non-EFI and gas EFI engines, providing advanced testing and protection functions to ensure optimal performance. With an intuitive backlit LCD interface and flexible programming options via panel or PC software, it offers comprehensive control over critical engine parameters.

Technical Specifications

Monitoring Parameters

- Frequency
- Voltage
- Current
- Oil Pressure
- Water Temperature
- Fuel Oil Level

I/O Configuration

6 Channels

Inputs

7 Channels

Outputs

Programming Methods

Front Panel • PC Software Suite

Engine Compatibility

Non-EFI, Gas EFI

Display Type

Backlit LCD
