

Glass and Ceramic Processing Machine

This industrial machine is designed for processing both glass and ceramic materials. It features a durable frame, a heating element with a protective grid, and a control panel.

Overview

Industrial Processing Capability

This professional-grade glass and ceramic processing machine is engineered for precision fabrication in demanding manufacturing environments. Featuring a robust construction and a specialized yellow work surface, it provides a stable platform for complex material handling. The unit includes an integrated heating element protected by a safety grid and a comprehensive control panel, ensuring reliable operation and consistent output quality.

Technical Specifications

Model Identifier	JZT-1800x1200
Key Features	Industrial Grade, Robust Frame, Protective Heating Grid, Integrated Control Panel
Work Surface	Yellow high-durability surface
Power Connection	Yes
