

Glazed Tile Roof Sheet Forming Machine

This machine is designed for efficient and precise manufacturing of glazed roofing tiles. It features multiple forming stations and a hydraulic pressing system to ensure consistent tile profiles.

Overview

High-Efficiency Glazed Tile Production

This industrial roll forming machine is engineered for the precise manufacturing of glazed tile roof sheets. Featuring a robust steel frame and a sophisticated hydraulic pressing system, it ensures consistent, high-quality profiles for various roofing applications. The integrated automated control system allows for streamlined operation and precise parameter adjustments, making it an ideal solution for high-volume production environments.

Technical Specifications

Production Speed

3 m/min
Speed

Material Thickness Range

0.8 mm

Cutting Tolerance

10m ± 1.5mm

Mechanical Components

Quantity of Rollers

14

Roller Material

45# steel with chrome plating

Shaft Specifications

75mm diameter, 45# forged steel

Cutter Blade Material

Cr12 mould steel (quenched 58-62°C)

Power & Control

Drive Mechanism

Chain • Gearbox

Main Motor Power	5.5 kW
------------------	--------

Hydraulic Station Power	4 kW
-------------------------	------

Control System	PLC
----------------	-----

Construction

Machine Body Frame	350H Steel
--------------------	------------
