

Graphene Film Electric Heating Painting

This graphene film electric heating painting combines aesthetic beauty with modern heating technology to provide warmth. The painting features intricate details of flowers, rocks, and calligraphy.

Overview

Innovative Graphene Heating Solution

This smart electric heater utilizes advanced graphene technology to provide an efficient, eco-friendly alternative to traditional home heating systems. Designed as a functional piece of art, it combines aesthetic appeal with rapid heating capabilities, reaching the desired temperature in just 30 seconds. By emitting far-infrared rays, it offers a comfortable and health-conscious warming experience for any home or office environment.

Performance

Heating Speed

30 seconds

Heat-up Time

30 seconds

Cool-down Time

Technology

Graphene Film, Far Infrared Emission, Electric Heating

Features

Environmental Impact

Zero CO2 Emissions • Clean Energy • Energy Efficient
