

# Gravity-Fed Resin Filter Water Purifier

This gravity-fed water filtration system is designed for household use. It features a multi-stage filtration process including a resin filter to soften hard water and remove impurities.

## Product Overview

### Gravity-Fed Filtration System

This gravity-fed water filtration system is engineered for reliable household water purification. Utilizing a multi-stage process that incorporates a specialized resin filter, it effectively softens hard water while removing common impurities. The system's intuitive design, featuring separate upper and lower chambers, ensures a clear distinction between unfiltered and treated water.

## Technical Specifications

### Design Structure

- Upper chamber for unfiltered water
- Lower chamber for filtered water
- Centralized filter element

<b>Filtration Technology</b>	Multi-stage gravity-fed filtration with resin softening
<b>Material</b>	Food-grade plastic

## Usage & Application

### Application

Household • Drinking Water

<b>Key Benefits</b>	Water Softening, Impurity Removal, Gravity-Fed, Food-Grade Material
