

Ground-Mounted Solar Panel Array

This ground-mounted solar panel array is designed for efficient energy generation. The panels are arranged in rows to maximize sunlight capture.

Overview

Professional Ground-Mounted Solar Array

This ground-mounted solar panel array is engineered for high-efficiency energy generation in large-scale applications. Featuring a robust mounting structure with optimized tilt angles, the system maximizes sunlight capture across its 120 kW capacity. It is a complete, grid-integrated solution designed for long-term operational performance.

System Specifications

System Size

120 kW
Capacity

Completion Date	June 2010
Installation Location	Connecticut, USA
Key Features	Ground-Mounted, Grid-Integrated, High-Efficiency Cells, Optimized Tilt
