

Hammer Drive Anchor Zinc-Plated Steel Screw with Nylon Body

This hammer drive anchor is designed for quick installation in various materials. It features a zinc-plated steel screw and a nylon anchor body, suitable for light to medium-duty applications.

Product Overview

Versatile Fastening Solution

The Hammer Drive Anchor is a reliable fastening solution designed for efficient installation in various construction materials. Featuring a durable nylon anchor body paired with a zinc-plated steel screw, it provides a secure hold for light to medium-duty applications. This anchor is specifically engineered for use in concrete, brick, and block surfaces, making it an essential component for general industrial and machinery assembly tasks.

Technical Specifications

Suitable Base Materials

- Concrete
- Brick
- Block

Duty Rating

Light-Duty • Medium-Duty

Material Composition

Zinc-Plated Steel, Nylon

Installation

Installation Process

- Drill hole
- Insert anchor
- Hammer screw until flush

Industrial Usage

Primary Industries

Apparel Machinery, Textile Machinery, General Industrial
