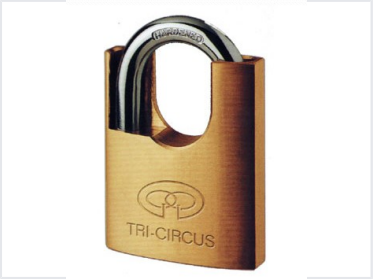
Hardened Steel Shackle Padlock

This high-security padlock features a hardened steel shackle and a durable brass body. It is designed for robust protection against tampering and forced entry.



Product Overview

Industrial Strength Security

This high-security padlock is engineered with a hardened steel shackle and a durable brass body to ensure long-term reliability and defense. It is specifically designed to resist tampering, picking, and drilling, making it an ideal choice for heavy-duty security applications. Whether securing external gates, storage units, or critical doorways, this lock provides consistent performance in demanding environments.

Physical Attributes

Material Composition	Hardened Steel, Brass
Shackle Type	Hardened Steel

Security Features

Resistance Capabilities

- Pick resistant
- Drill resistant
- Tamper resistant

Common Applications

Gates • Doors • Storage Units
