

HDMI Cable Tester

This HDMI cable tester is a diagnostic tool for verifying HDMI cable integrity and connectivity. It features LED indicators to display the status of each wire and is essential for identifying faulty cables and ensuring optimal signal transmission.

Product Overview

Essential Diagnostic Tool

The HDMI Cable Tester is a professional-grade diagnostic tool designed to verify the integrity and connectivity of HDMI cables. It automatically scans each individual core to identify potential faults, ensuring optimal signal transmission for high-definition audio and video applications. This device is an essential addition to any technician's toolkit for rapid cable troubleshooting.

Technical Capabilities

Testing Functions

- Open circuit detection
- Short circuit detection
- Cross circuit detection
- Cable assignment verification

Control Options

Auto Control, Manual Control

Interface & Design

Status Indicators

Individual LED for each core

Connectivity

Dual HDMI Ports
