

# Heat Shrinkable Cable Core Joint Kit

Heat shrinkable core joint kits are designed for insulating, sealing, and protecting cable core connections. They provide reliable electrical insulation and environmental sealing for underground and overhead cable systems.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Cable Jointing Solutions

The 35KV series heat-shrinkable cable core joint kit is engineered to provide superior waterproofing, stress control, and electrical insulation. Designed for reliability, these joints offer excellent mechanical performance and are built to withstand harsh environmental conditions, including moisture and chemical exposure. This lightweight solution is ideal for critical infrastructure, including power supply networks, petrochemical facilities, railways, and seaports.

## Technical Specifications

### Voltage Rating

**35 KV**

Voltage

### Key Performance Features

Waterproof, Stress Control, Excellent Insulation, UV Resistant, Chemical Resistant

## Applications & Usage

### Suitable Industries

- Power Supply
- Petrochemical Industry
- Metallurgy
- Railway Stations
- Seaports

### Common Applications

- Cable Splicing
- Cable Termination
- Cable Repair
- Underground Cable Systems
- Overhead Cable Systems

## Kit Components

### Kit Contents

- Heat shrinkable tubes
- Sealing mastic
- Installation instructions
- Tools and accessories
