

Heavy-Duty Diesel Engine

This diesel engine is designed for heavy-duty applications. It utilizes a high-pressure fuel injection system and a turbocharger to enhance power output and improve fuel economy.

Overview

Heavy-Duty Performance

The SC8D is a robust diesel engine engineered specifically for heavy-duty applications. It features an advanced high-pressure fuel injection system designed to optimize combustion efficiency and reduce emissions. Equipped with a turbocharger, this engine delivers enhanced power output while maintaining excellent fuel economy, making it a reliable choice for demanding industrial environments.

Technical Specifications

Key Components

- Cast iron engine block
- Forged steel crankshaft
- Aluminum alloy cylinder head

Turbocharged System	Yes
---------------------	-----

Applications

Suitable Industries	Construction Equipment, Agricultural Machinery, Power Generation
---------------------	--
