

Heavy-Duty Machinery Movers with Rotating Top Plate

These heavy-duty machinery movers are designed for transporting heavy loads with ease and precision. They feature a robust construction with a rotating top plate for flexible positioning and smooth movement.

Product Overview

Heavy-Duty Machinery Movers

These heavy-duty machinery movers are engineered to facilitate the transport of substantial loads with precision and ease. Featuring a robust construction and a rotating top plate, they allow for flexible positioning and smooth maneuverability across flat surfaces. Designed for industrial and construction environments, these rollers provide an efficient solution for relocating equipment weighing from several to dozens of tons.

Product Features

Available Skate Types

- Steerable machinery skates
- Mounted roller skids
- Rotating moving dolly
- Veered moving skates

Performance Metrics

Load Capacity Range

1 tons

Minimum Load Capacity

50 tons

Maximum Load Capacity
